Paramedic training uses

The examples of medical treatment in the database are rarely well detailed. When they are, they provide examples of both "positive" and "negative" responses to accidents. Some of the worst negative responses are not the responsibility of the medic - who were simply not provided with the equipment or ambulance that they need. Parts of the reports may be used in lectures or presentations or they can be distributed for critical discussion.

Examples of the injuries that may be encountered can be found throughout the database. Records with detailed medical data are sparse. The following sample are records that include photographs of the injuries or detailed medical reports. Other photographs may be on record so if they are needed for training, please send an email to ask.

The links below only take you to a few examples. There are many others among the database records.

DEATH
